

Agent Onboarding Console - Dashboard Pages

Where the dashboards should live

You have not worked in ServiceNow, so split by audience:

Audience	Host	Why
Requesters, approvers	ServiceNow Service Portal (catalog item, "My Requests", approvals)	Native, no build effort, they already live there
Platform / security team	Custom Agent Onboarding Console (web app)	Joins CMDB, State Store, Oasis, Wiz, Dynatrace, Splunk in one view. ServiceNow alone cannot see runtime telemetry
Runtime operations	Dynatrace (traces, SLOs) and Splunk (logs) native dashboards	Deep-link from the console instead of rebuilding

System of record rule: ServiceNow CMDB = what the agent is and who owns it. State Store = what onboarding did. Oasis/Wiz = risk. Dynatrace/Splunk = runtime behavior. The console reads, it does not own data.

Pages

#	Page	Key content	Data sources
1	Agent Inventory	All agents: name, origin (Agent 365 / Claude), role (supervisor / worker), tier, envs, owner, status, CI link. Filters by tier, role, origin, env, status	CMDB
2	Agent Detail	Per env: Entra client ID + object ID, credential type + expiry, app roles, APIM product, MCP tool allow-list, guardrail set, supervisor-worker bindings, Oasis + Wiz risk, last trace, profile version	CMDB, State, Entra, Oasis, Wiz, Dynatrace
3	Onboarding Pipeline	Jobs in flight, current phase, duration per step, retries, compensations, failed step + reason	State Store, Splunk
4	Approvals Queue	Pending approvals by tier, age in stage, SLA breach, CAB status for Prod	ServiceNow
5	Environment Promotion Matrix	Agent x env (dev / qa / uat / prod) grid, drift between envs (tools, roles, policy versions differ)	CMDB, State, APIM, MCP
6	Use-Case Framework Coverage	Agents by criticality x role, profile version in use, agents on outdated profile, applied security and compliance pattern per agent	UCF, State
7	Identity and Credentials	Managed identity vs federated vs certificate vs secret counts, expiring in 30 / 60 / 90 days, rotation compliance, any client secrets (should be zero)	Entra, Key Vault, Oasis
8	Tool and Delegation Map	Graph: supervisor -> worker -> tool. Unused tools, over-granted scopes, workers callable by unapproved supervisors, delegation depth	MCP Gateway, Dynatrace traces
9	Risk and Findings	Oasis NHI findings and Wiz posture findings per agent, severity, ServiceNow ticket, age, SLA	Oasis, Wiz, ServiceNow

#	Page	Key content	Data sources
10	Runtime Health	Calls, error rate, p95 latency, deny rate, guardrail blocks per agent per env, deep link to Dynatrace	Dynatrace
11	Ownership and Recertification	Owner departed, no backup owner, recert due / overdue by tier cadence	CMDB, Entra, Oasis
12	Offboarding	Retirement requests, per-step teardown verification (identity, roles, APIM, MCP, KV, CI)	State, CMDB
13	Audit Trail	Who requested, approved, changed what, when, per agent, correlation ID linking to Splunk	State, ServiceNow, Splunk
14	Platform Metrics	Time to onboard (p50 / p95) by tier, success rate, top failure steps, agents onboarded per month by origin	State, Splunk

Minimum viable set

Start with 1, 2, 3, 9, 11. Add 5, 7, 8 once more than one environment is live.
